SUMMARY

Software engineer graduating December 2026 who works directly with users to find and solve real operational problems, from gathering requirements to shipping, training, and supporting the solution in production. Replaced a legacy inventory system tracking uniforms for 473 active renters and cut a 6-hour billing close to under 30 minutes. Building an autonomous AI coding agent.

EDUCATION

Brigham Young University

Bachelor of Science: Computer Science

- GPA 3.80

Dec 2026

Provo, UT

Salt Lake Community College

Associate of Science: Computer Science & Information Systems

- GPA 3.97, Honors Program

May 2024

Taylorsville, UT

SKILLS

Languages: Python, TypeScript, C++, SQL

Frameworks: React, Flask, FastAPI

Full-Stack: REST APIs, authentication systems (JWT, OAuth/OIDC), frontend/backend architecture

DevOps & Tools: Docker, GitHub Actions (CI/CD), Linux, AWS

AI/Agentic Development: LLM tool-use & function calling, agent orchestration, API integrations (Wrike, GitHub)

EXPERIENCE

BYU Print and Mail

Software Engineer

Sep 2024-Present

Provo, UT

- Worked directly with laundry managers and student operators to replace a legacy inventory system, owning it end to end from database to frontend to production. Used daily by operators to process 60,000+ scan events monthly and track uniform rentals for 473 active renters; page loads dropped from about 7 minutes to seconds.
- Shadowed operators at scanning and RFID stations and shipped changes based on observed workflows, including a cascade-scan feature that checks out a renter's whole weekly batch (about 11 uniforms) in one scan.
- Found problems nobody had raised: inactive users could keep washing uniforms unnoticed, and unreturned RFID items were tracked in stale spreadsheets. Built validation and a live overdue-items dashboard.
- Led the production launch with one new developer and no manager on site, diagnosing RFID scanners still writing to the old database and fixing it live.
- Built a month-end close tool from scratch that reads from and writes to PACE via its API, creating the jobs and invoices accounting bills against. Cut a 6-hour process to under 30 minutes; demoed and trained the assistant controller.
- Promoted to Team Lead; onboarded and mentored two new developers. Ran live demos and one-on-one training sessions for managers, accounting, and student operators.

PROJECTS

Autonomous Code-Change Agent | Personal Project

- Building an AI agent that integrates Wrike's API to pull assigned tasks, autonomously navigates a codebase to implement the required change, and opens a GitHub pull request without manual intervention.

VOLUNTEER EXPERIENCE

The Church of Jesus Christ of Latter-day Saints

Full-time Representative

Oct 2020-Oct 2022

Chicago, Illinois

- Managed and directed 100+ volunteers, setting goals and coordinating efforts to improve team accountability.

ABILITIES & INTERESTS

- Fluent in Spanish, basic German; Eagle Scout; interests in game development, soccer, and backpacking.
